THE ARCHITECTURAL FORUM
SPECIAL REFERENCE NUMBERS

BEGINNING in 1922, The Architectural Forum established a precedent in architectural publishing by devoting every third issue exclusively to one type of building. These are known as special Reference Numbers and during 1922 and 1923 six have been published as follows:

Schools  August, 1922
Hospitals  December, 1922
Country Houses  March, 1923
Banks  June, 1923
Industrial  September, 1923
Hotels  November, 1923

Each is a complete reference text book containing the most recent and up-to-date presentation by acknowledged authorities on designing, planning, equipping, and maintenance. Each is profusely illustrated with carefully selected exteriors, interiors and readable plans with graphic scales together with cubic foot costs representative of the best work in all sections of the country.

—— from the Journal, R.I.B.A.

In turning the pages of a recent issue of our esteemed English contemporary, the Journal of the Royal Institute of British Architects, we happened upon a review which epitomizes our editorial ambitions:

"This section of practice (hospital work) has been exemplified in a very remarkable degree in the December (1922) Number of The Architectural Forum, which is what is termed a Hospital Reference Number. Every sectional problem has been assembled and discussed in fifteen essays, voluminously illustrated and exhibiting a fine array of recent exteriors which are of remarkable and abiding interest and of real architectural value. This bulky quarter is set down in the midst of 150 pages of practical illustrated advertisements of hospital requirements of much interest and very subjective, and, apart from the subject matter under review, deserving of more than passing notice."

What white pigment is to the Painter

ATLAS WHITE PORTLAND CEMENT
IS TO THE ARCHITECT

Suppose the painter had to tone and shade his colors with a basic gray pigment. Would clear or true colors be possible?

In stucco, scrafitto and much other decorative architecture the same applies. Consider ATLAS White the basic pigment, making possible true, clear and permanent colors. Colored sands, mineral pigments or marble chips give endless variety of possible colors.

And added to this quality is permanence, for ATLAS White is a true Portland Cement, with all the strength and permanence of this material, building into stucco textures lasting beauty.

The adaptability of this material to different types of architecture, different moods of the individual architect, makes it as real a medium for artistic expression as the pigments on a Painter’s palette,—a fact which should not be overlooked when considering more utilitarian qualities of permanence and fire-safeness of ATLAS White.

The Atlas Portland Cement Company gladly supplies the architect with any information he wishes concerning the method of handling and applying ATLAS White.

Electrical Information for Architects

The broad scope of the Architect's service in recommending the best materials for many types of construction requires a constant source of up-to-date information on the products available.

The progress in the electrical industry has been marvelous. The General Electric Company, a pioneer in this work, has always maintained a policy of thorough test and approval before offering its products in the market, to the end that the G-E monogram may mean first of all—that the product it distinguishes is a practical, trustworthy device.

This company's advertisements now appearing in the leading Architectural and other business publications give important information about electrical equipment that goes into a modern building.

A complete catalog of the entire line of G-E wiring devices may be obtained for the asking. A ready guide to electrical equipment with Bulletin references may also be found in Sweet's Architectural and Engineering Catalogs.

G-E specialists connected with every district office of the company are at the command of architects wishing authoritative advice on all electrical matters.

LALLY COLUMN COMPANY
CAMBRIDGE, MASS.
The experience of that organization in the construction of Factories, Mills, Warehouses and other Industrial and Mercantile Buildings and Power Plants well equips us to serve architects and owners desirous of securing the best in construction. This experience covers all classes of construction with many repeat orders from some of the best people in New England.

This Company was incorporated in Massachusetts in 1910 as New England Concrete Construction Company and continued under this style until the demands upon it for brick and timber and other forms of construction, the growing undesirability of territorial and specialty names, together with suggestions of many friends, made it appear that a change was desirable and the present form was adopted. Our tools and equipment are of the best and latest and such as to enable us to handle efficiently and economically either large or small projects for those who are particular as to quality of the work desired. Our financial responsibility is equal to all requirements. Bank references if you want them. We solicit your inquiries. We are affiliated with Associated General Contractors of America, American Society of Civil Engineers, Master Builders Association of Boston, Building Trades Employers Association and Boston Chamber of Commerce, all by invitation.

Based on our "predicated experience," allow us to suggest, in plans for greenhouses you always provide for possible additions. In eight cases out of eleven the need arises. The side entrance as a feature of this single house, provides an admirable connection for a duplicate house as suggested on the plan.

For Three Quarters of a Century

Isn't wisdom largely predicated experience? The more the experience, then the greater the wisdom. With this in mind it seems entirely pardonable for us to stress at times our greenhouse experience covering close to three-quarters of a century. From Hell Gate to Golden Gate, the country over, are examples of our "predicated experience". Let us co-operate with you when you have a greenhouse problem.
NOT ONCE since gas was first used in Boston, back in 1823, has it ever failed. It is the one fuel you can always rely upon getting.

And it is Boston’s fuel because it answers the requirements of city life, providing a service that fits exactly with modern ideas of efficiency.

Gas is the ultimate fuel for all purposes and must eventually supplant all solid fuel in order to conserve the needed by-products which are lost when raw fuels are consumed.

New and better equipment to keep step with the steady advancement in greater uses of gas is constantly being supplied. And even in the product itself it is not unlikely improvements will develop from scientific research now under way.

Consider gas carefully in all your plans

Comparative Pipe Costs
Are Graphically Shown
In This New Booklet

Written primarily for the prospective home builder, "The Ultimate Cost" explains without technicalities why Reading Genuine Wrought Iron Pipe has a life two to three times that of steel. You as an architect will be interested in the valuable facts disclosed—particularly if you put yourself in the layman's place as you turn the pages.

We will gladly mail you a copy, and willingly discuss any piping proposition which you may be considering. Data on file at our office is at your free disposal, and our convenient location insures prompt personal service at all times.

Ferrocraft Grille
Was Selected from
Half a Million Dollars Worth of Designs

In our pattern vaults are over half a million dollars locked up in Ferrocraft Grille patterns. From this collection, numbering many hundreds, we have chosen those especially designed by architects, and have added a number of adaptations of famed Old World subjects. All Ferrocraft Grilles are painstakingly hand-tooled by skilled metal crafters. Do not confuse these grilles with the usual foundry's ornamental cast iron work.

Architecture of the past, which has stood the test of time structurally as well as from an artistic point of view, is the basis of much that is best in modern architecture.

Many of the most beautiful buildings of the Italian Renaissance were executed in Terra Cotta.

Precedent and practical considerations authorize the sincere use of Terra Cotta today.

THE EVIDENCE OF QUALITY

The quality of plumbing fixtures can best be judged by the character of the buildings in which they are installed. The Boston Chamber of Commerce Building, First National Bank Building, Old Colony Trust Co. Building, Massachusetts Institute of Technology Dormitories and other prominent buildings in and about Boston are being equipped with —

"Tepeco"

All-Clay Plumbing Fixtures

which bear the above trade mark.

This mark is a guarantee of quality. It is the mark by which The Trenton Potteries Company establish their identity, that those who use "Tepeco" Fixtures may be assured of the very best.

ADDS OLD-WORLD CHARM

THE soft, dull tones of old European tile roofs are admired by almost every traveler. Duplicate the pleasing effect of these rich, colorful roofs through the use of "ANCIENT" Tapered Mission Tile. It closely resembles the old hand-made product and is hard-burned to resist Northern climatic conditions.

Just What "Frink" Stands For In The Lighting World

In case you too are under the impression that Frink is the name of a reflector this will set you straight.

Frink is the sign of a Service. A Service that develops and sells ideas for unusual methods of electric illuminating. A Service that sells results.

Incidentally we manufacture and deliver the equipment necessary to produce the results we sell.

Starting before the days of electric lighting, for over 66 years this Service has been developed through hundreds of thousands of contracts.

Frink Service reaches everywhere that electric lighting can be used. There is seldom a job too small for it to be economically employed. Certainly none is ever too large.

At any time one of us would be glad to explain our Service more in detail, or confer with you over any lighting problem you may have.

LUXEBERRY WOOD FINISH
NOW MADE IN DULL

Three generations ago Berry Brothers' original Hard Oil was used by expert wood finishers everywhere for all fine interior work.

Those workmen of the old school knew quality and demanded it. As a result, specimens of their work, untouched these many years and in perfect condition still, are now and then to be found in an old mansion of yesterday.

Berry's original Hard Oil is now known as Luxeberry Wood Finish.

Dull Luxeberry enables present-day painters to attain superb deep-toned effects without rubbing. Likewise it permits architects to meet prevailing requirements for dull finishes without increasing labor costs or sacrificing quality.

What can be accomplished with the brush alone .... when Dull Luxeberry Wood Finish is used .... will amaze you if you are not already familiar with this remarkable finish.

Finished panels, samples and complete information sent on request

No. 60
SMITH SMOKELESS BOILER
With Oxygen Torch
For Burning High Volatile
Bituminous Coals

The No. 60 Smith Boiler with oxygen torch for burning all fuels marks a distinct scientific advance in boiler construction.

The main condition to be met in burning high volatile bituminous coals without producing smoke is a sufficient quantity of air for complete combustion of gases. Naturally the quantity of air necessary varies with the condition of the fire. In the No. 60 Smith Smokeless Boiler, air is admitted thru the oxygen torch. The controls are conveniently placed at the front of the boiler and observation apertures are provided so that the regulation may be certain and efficient.

Valves that Contribute to Good Plumbing and Heating

YOU will find Jenkins Valves the good, strong, well-made valves that you desire for good plumbing and heating. Each valve of every type is designed, made, tested, and guaranteed for the maximum service, not merely for the average. It has reserve strength to take care of the strains of expansion and contraction, and lifting and settling of piping. You’ll provide PERMANENCE if Jenkins “Diamond” Valves are specified.

SAMSON SPOT SASH CORD

Made of extra quality stock, carefully inspected and guaranteed free from all imperfections of braid or finish. Can be distinguished at a glance by our trade mark, the Colored Spots, used only with this quality.

By using Samson Spot Cord you can assure your clients of uninterrupted service for twenty-five years or more. You will also protect them from the annoyance and expense of breaking cords, which will quickly begin if they use ordinary roughly braided cord. Common sash cord frequently contains a loaded centre or core, put in to increase the weight and the price per foot. This construction makes the cord wear out very quickly in running over the pulleys.

The difference in cost between Spot Cord and the cheapest kind is small in comparison with the expense of replacing one broken cord.

SAMSON CORDAGE WORKS, Boston, Mass.

Cabot's Creosote Shingle Stains
The original shingle stains, and the standard for forty years. The richest, strongest and most durable colors and genuine creosote, "the best wood preservative known."

Cabot's Old Virginia White
For Wood, Brick, Stucco or Stone.
The clean, brilliant "whitewash white" effect of Old Virginia White has real distinction. As bright as new whitewash and as durable as paint, but does not look "painty."

Cabot's Old Virginia Tints
The Old Virginia White tinted in a great variety of delicate shades, which are almost like pastels in quality.

Cabot's Double-White
For all work where a heavier coating than Old Virginia White is wanted. Whiter than white paint and two coats equal to three of white lead.

Cabot's Waterproof Stucco and Brick Stains
For staining and rain proofing cement and brickwork. Go twice as far as heavy coatings, cost less and cannot crack or peel.

Cabot's Insulating and Deadening Quilt
Makes houses warmer in Winter and cooler in Summer. Saves its cost many times over in reducing fuel bills. Deadens sound in floors and partitions.

When Roger Babson invests in warmth

THOUSANDS of discerning investors have profited by Roger Babson’s business reports and financial service. Recently Mr. Babson made an investment on his own account, and these paragraphs are from his letter concerning it:

"The TYPE A Boiler installed in my residence is what you call it—a 'Heat Machine'," he writes. "During the coldest weather we attend to it only twice a day and at times it can be left sixteen hours without attention.

"My experience with the regular type of boiler in my old residence leads me to believe that the Type A is fully 20% more economical."

Mr. Babson often advises his clients to "take a loss" by selling a bad investment, and put the money into a security with assured earning power. May we suggest that this same advice might well be given to clients who are more impressed with economy in the initial cost of their heating plant than economy in fuel consumption?

For the IDEAL TYPE A HEAT MACHINE is a lifetime investment. Its unique construction assures a saving of from 20% to 33 1/3% in fuel.

In a few years the initial cost is paid back, and thereafter it continues to pay a dividend each year that can never be passed.

To every Architect and Heating Engineer who has not full specifications, sizes, performance and construction details of the IDEAL TYPE A in file, we offer a complete book describing them. Your name on your letterhead sent to either address below will bring it at once.

AMERICAN RADIATOR COMPANY
